

PGA Verified Tender 105

This is a very unusual bull .

It's very rare to identify an animal that has as much upside potential as this youngster has.

“105” is homozygous for all three GeneSTAR tenderness markers. In addition to this, he set a new yearling weight record for our forage and fiber program, with no corn starch being fed. **He is our Largest Ribeye, Lowest Fat, Highest ADG and Highest Yearling Weight bull in this calf crop.** Look over his pedigree and performance figures and then study his picture. Obviously the proof will be in his offspring. He gets to run with our cows this summer.

“105” has several important convenience traits:

- | | |
|--|--|
| <ul style="list-style-type: none"> ✓ Hooded eye ✓ Big footed ✓ Clean strong bone ✓ Very high heeled ✓ Superior conformation ✓ Clean sheath ✓ Big scrotal ✓ Very clean shoulder - might be suitable for heifers | <ul style="list-style-type: none"> ✓ Long body ✓ Quiet disposition ✓ Endophyte tolerant ✓ Heat & humidity tolerant ✓ Maternal side is as good as it gets – mother is a high growth, low birth weight cow, grandmother is a pathfinder, low birth cow and is responsible for our highest IMF cattle. |
